Pressure	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Factor	0.25	0.38	0.50	0.65	0.75	0.88	1.00	1.13	1.25	1.38	1.50	1.63	1.75	1.88	2.00	2.13

Filter Grade	Particle Removal Down To	Oil Removal Down To*	Nominal initial Pressure Drop
Р	3 micron	=	0.03 bar g
U	1 micron	0.1mg/m ³	0.05 bar g
Н	0.01 micron	0.01mg/m ³	0.09 bar g
S	0.01 micron	0.001mg/m^3	0.10 bar g
С	-	0.003mg/m	0.10 bar g

- Maximum recommended operating temperature of 60°C (high temperature range is also available)
 Minimum recommended operating temperature 1°C.

 Maximum recommended operating temperature 1°C.

 Maximum recommended operating pressure of 16 bar g and 50 bar g.

 Maximum recommended pressure differential for element change is 0.6 bar g. (Except Grade C)

 Material for G-Type filters is aluminium. Material for F-Type filters is steel.

COMPRESSED AIR FILTERS

High efficiency filtration for clean & technically oil-free compressed air

G-SERIES / F-SERIES

Engineering Solutions to Cleaner Air

Why We Need To Purify Our Compressed Air

In just one cubic metre of air, there are millions of particles potentially harmful to your machines and equipments. These are primarily made up dust, bacteria, viruses, smoke, fumes, hydrocarbons, water, oil and other contaminants derived from human and industrial activities. When this air is sucked into your compressor and compressed to 8 bar pressure, for instance, the concentration of particles will increase by eight times. This will make the air more troublesome by eightfold.

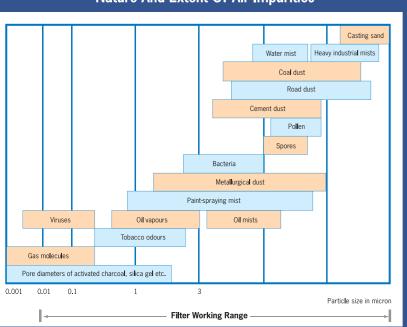

Troublesome in the sense that roughly 80% of these particles are so small that they will pass easily through your compressor's intake filters and find their way to your process line to cause either frequent expensive downtime of your pneumatic machine or adversely affect the quality of your end products.

This is why it makes economical sense to incorporate compressed air treatment into your compressed air system as the benefits would outweigh the cost, which would probably be only a small fraction of your total business investment.

With this in mind, Airfilter Engineering has ventured forth to produce a range of high quality filters, with essential parts being imported from renowned suppliers in Europe.

However, in the end, it is the highly efficient pleated filtration media produced by Airfilter Engineering that makes all the difference.

Nature And Extent Of Air Impurities

AFE Filter Grades

Airfilter Engineering (AFE) has developed a comprehensive range of filter grades to cater to the requirements of different applications. All our filter media are of pleated design to ensure higher filtration area. Here at AFE, filters and elements can also be custom-made to suit your needs.

AFE Filter Grade P

- For coarse pre-filtration
- Particle removal down to 3 micron

AFE Filter Grade U

- For general filtration
- Particle removal down to 1 micron
 Oil content down to 0.1 mg/m³ at 20°C

AFE Filter Grade H

- For high performance filtration
- Particle removal down to 0.01 micron
- Oil content down to 0.0 1 mg/m³ at 20°C

AFE Filter Grade S

- For high performance filtration
- Particle removal down to 0.01 micron. Oil content down to 0.001 mg/m³ at 20°C in conjunction with filter grade H

AFE Filter Grade C

- Activated carbon filter.
 For odour removal. Applicable in oil lubricated compressors.
- For removal of oil content down to 0.003 mg/m³ at 20°C in conjuction with filter grade H

The basic benefits that we can offer with our pleated filter media are:

- Higher effective filtration area
- Higher dirt holding capacity
- Lower pressure drop
- · Possibility of higher air flow

IOO OFFICAL COACO. TARLE OF CONTAINMANTS AND DUDITY OF ACCES											
ISO 8573-1: 2010 - TABLE OF CONTAMINANTS AND PURITY CLASSES											
Purity Class		PART	ICLES		AND LIQUID ATER	OIL					
		mber of particles per function of particle		Mass Concentration C _p	Pressure Dewpoint	Concentration Of Liquid Water, C _w	Concentration Of Total Oil (Liquid, Aerosol & Vapour)				
	0.1 µm < d ≤ 0.5 µm	0.5 µm < d ≤ 1.0 µm	1.0 µm < d ≤ 5.0 µm	mg/m³	°C	g/m³	mg/m³				
0	As specified by the equipment user or supplier and more stringent than Class 1										
1	≤ 20 000	≤ 400	≤ 10	-	≤ -70	-	≤ 0.01				
2	≤ 400 000	≤ 6 000	≤ 100	-	≤ -40	-	≤ 0.1				
3	Not specified	≤ 90 000	≤ 1 000	-	≤ -20	-	≤1				
4	Not specified	Not specified	≤ 10 000	-	≤+3	-	≤ 5				
5	Not specified	Not specified	≤ 100 000	-	≤ +7		-				
6	-	-	-	$0 < C_p \le 5$	≤ +10	-	-				
7	-	-	-	5 < C _p ≤ 10	-	C _w ≤ 0.5	-				
8	-	-	-	-	-	$0.5 < C_w \le 5$	-				

The ISO 8573-1 is a key element of the ISO 8573 series of documents and it specifies the various purity classes of compressed air with respect to particles, water and oil. EXAMPLE OF DESIGNATION:

- ISO 8573-1:2010 [1:2:1] indicate, - purity Class 1 for particles
- purity Class 2 for humidity and liquid water
- purity Class 1 for oil
